

Product: MNX Knock out enclosure
Material: Polycarbonate

All Fibox pre-formed knock-outs enclosure series include a small notch in the knock-out to ensure this operation is easily completed.

Tools:

Quarter inch slot head screwdriver
Hammer* (average weight 10-20 ounces)
Safety glasses (recommended)
Work gloves (recommended)

Directions:

Place the screwdriver upright into the notch along the ring of the desired sized knock-out.

Using the hammer make a sharp hit on the screwdriver handle.

Knock-out edge may require some deburring.

If you have any questions please contact your Fibox representative

Enclosing innovations

* A mallet will not transfer enough energy on impact.

Note: After the knock-out has been punched a NEMA 4X cable gland or comparable component must be used to retain the NEMA 4X rating
